

I claim:

- 1 1. A water activated chiming device to produce tones of random sequence and degree,  
2 comprising:
  - 3 at least one resonating means for producing a tone or sound when impacted,
  - 4 a free hanging striker suspended along a vertical axis adjacent to said resonating
  - 5 means for striking said resonating means,
  - 6 a means for delivering an upward flow of water having an apex located substantially on
  - 7 said vertical axis to
    - 8 said striking means for exciting said striking means resulting in chaotic impacts
    - 9 with said resonating means to produce tones of random sequence and degree,
  - 10 a means for adjustable suspension of said striking means along said vertical axis whereby
  - 11 elevating said striking means relative to said apex decreases the production of
  - 12 tones of random sequence and degree and lowering said striking means relative to
  - 13 said apex increases the production of tones of random sequence and degree, and
  - 14 a means to support and align the elements.
- 1 2. The water activated chiming device of claim 1, wherein said striking means is  
2 spherical.
- 1 3. The water activated chiming device of claim 1, wherein said means for delivering  
2 upward water flow includes a conduit positioned along said vertical axis having a  
3 horizontal upper end and a pumping apparatus coupled to the lower end of said conduit  
4 for producing upward water flow through said conduit to said striker.
- 1 4. The water activated chiming device of claim 1, including a water reservoir  
2 submerging said lower end of said conduit and said pumping apparatus.

- 1       5. The water activated chiming device of claim 3, wherein said conduit is a vertical pipe
- 2            having a circular opening at said upper end.
- 1       6. The water activated chiming device of claim 1, wherein said resonating means
- 2            includes a configuration of tuned chimes encircling said striker.
- 1       7. The water activated chiming device of claim 6 wherein said configuration of chimes
- 2            are included in a resonating chamber formed by a housing.
- 1       8. The water activated chiming device of claim 1, wherein a body or framework
- 2            supports and unifies the elements in a proper working relationship.
